December 1, 2006

The Honorable George W. Bush
The White House
1600 Pennsylvania Avenue, NW
Washington, DC 20500

Dear President Bush:

As a uniquely broad coalition of environmental and public health, industry, and state and local governmental groups, we are writing to request support in your Fiscal Year 2008 budget for two important environmental programs. We urge you to provide $49.5 million for the Diesel Emissions Reduction Act (the level proposed in the FY2007 budget) and increase funding by $25 million over the FY2006 appropriated level of $220.3 million for state and local air quality grants.

Diesel powered vehicles and equipment play an important role in the nation’s economy and are getting cleaner every day. The Administration has developed programs to help address emissions from the estimated 11 million existing diesel engines that are not affected by the model year 2007 engine standards. The Diesel Emissions Reduction Act (DERA), as authorized by the Energy Policy Act of 2005, is designed to provide significant emissions reductions from these existing engines whether publicly or privately owned. As included in the FY2007 budget, we urge you to again provide $49.5 million for DERA and consolidate the other clean diesel programs, including the Clean School Bus USA Program, Diesel Truck Retrofit and Fleet Modernization Program, Engine Idling Reduction Program and National Clean Diesel Campaign, with the intent that they be carried out as authorized within DERA. However, we request that you do not limit the program to nonattainment areas.

This investment is needed and fiscally responsible, yielding one of the greatest cost-benefit ratios of any federal program according to the Office of Management and Budget’s calculations. It will go a long way toward helping states and localities meet the nation’s clean air standards by encouraging the use of cost-effective emissions reduction strategies. Furthermore, similar to existing federal and state programs, the federal contribution will likely be dwarfed by the funding leveraged from other sources.

Additionally, we request that you increase funding for state and local air quality grants by $25 million above the FY2006 appropriated level of $220.3 million. State and local governments hold primary responsibility for preventing and controlling air pollution and rely on these grants to carry out their core obligations under the Clean Air Act, including monitoring air quality, assessing emissions impacts, developing comprehensive state implementation plans, permitting and inspecting sources, enforcing laws and regulations, and conducting public education and outreach.
We urge increased funding because state and local air quality agencies are under-funded and face increasing responsibilities – such as attaining and maintaining National Ambient Air Quality Standards, implementing clean air rules, and addressing toxic air pollutants.

States and localities and environmental, health, user, and industry groups all support $49.5 million for the DERA program because it is sound environmental, economic, and budgetary policy. Similarly, we believe that state and local air quality grants should be funded at $245.3 million because these grants are vital to achieve and sustain clean, healthful air across the nation.

Sincerely,
