

Air Sensors & Advanced Monitoring Technologies

NACAA Communicating Air Quality Conference
March 16, 2016

**Mohsen Nazemi, P.E.
Deputy Executive Officer
South Coast Air Quality Management District**

Low-Cost Air Quality Sensors

- Rapidly proliferating
- Tremendous potential
 - Low cost
 - Ease of use
- Multiple potential applications
 - Spatial/Temporal air quality info
 - Fence-line applications
 - Regulatory/Academic/Citizen's science
- How reliable/accurate are they????
- Critical need to systematically evaluate their performance

SMART CITIZEN KIT

AQ-SPEC - Background

- Established in July 2014
 - Over \$600,000 investment
- Main Goals & Objectives
 - Provide guidance & clarity for ever-evolving sensor technology & data interpretation
 - Catalyze successful evolution/use of sensor technology
 - Minimize confusion
- Sensor Selection Criteria
 - Commercially available
 - Optical
 - Electrochemical
 - Metal oxide
 - Real- or near-real time
 - Criteria pollutants & air toxics

AQ-SPEC - Overview

FIELD TESTING

(Side-by-side comparison w/ FRMs)

LAB TESTING

(Controlled conditions)

RESULTS

(Categorize sensors based on performance)

AQ-SPEC Field Testing

- Started on 09/12/2014
 - Sensor tested in triplicates
 - Two month deployment
 - Locations:
 - Rubidoux station
 - Inland site
 - Fully instrumented
 - I-710 station
 - Near-roadway site
 - Fully instrumented

AQ-SPEC Field Testing

Sensors	Pollutant Measured	Approximate Cost
AeroQual Ozone S500	O3	\$600
RTI MicroPEM	PM2.5 (real-time & integrated)	\$2,000
Shinyei PM Sensor	PM 2.5	\$1,000
MetOne Community Monitor	PM	\$1,900
MetOne E-Sampler	PM	NA
Speck (CMU) Airviz, Inc	PM2.5	\$200
Air Quality Egg	PM, CO, NO2	\$300
Alphasense B4 NO2 (Alphasense ISB)	NO2	\$90
Alphasense B4 NO2 with E-chem 328 board	NO2	\$90
Alphasense B4 Ozone (Alphasense ISB)	Ozone	\$90
Alphasense B4 Ozone with E-chem 328 board	Ozone	\$90
Landtec AQ Mesh (V1)	NO, NO2 and O3, CO, and SO2	10,000
Landtec AQ Mesh (V2)	NO, NO2 and O3, CO, and SO2	10,000
Alphasense OPC	PM fractions	\$450
Dylos DC1100/DC1700	Particle count	\$300
Smart Citizen	NO, NO2, CO, RH, T	\$175
AirBeam PM monitor	PM2.5	\$200
SDL307 mini laser	PM10, PM2.5	\$150
Sensaris Eco PM	PM2.5, VOC, T, RH	NA
Unitec Sense-it	CO, NO2, O3	2,000 Euros
Yoctopuce VOC	VOC	\$230
Cube	T, RH, CO2, VOC	\$125
Alphasense B4	O3, CO, CO2, H2S, SO2, NO, NO2, VOC	\$90/each (~\$450 for VOC)
China Way PM2.5 PC	PM2.5	\$700
2B OEM	O3	5,000
Grove Dust Sensor	PM (PM2.5?)	\$16
Sensorcon	CO	\$160
Sharp PM2.5 Sensor	PM2.5	\$20
ELM (Formerly CarairIT)	Multi-gas and PM?	NA
Libelium	Multi-gas and PM	\$3,000
Spec Sensors w/ Intel Edison	Multi gas	\$1,350 6

AQ-SPEC Lab Testing

T and RH controlled: T (0-50 °C); RH (5-95%)

Particle testing

- Particle generation system
- Particle monitors: mass concentration and size distribution

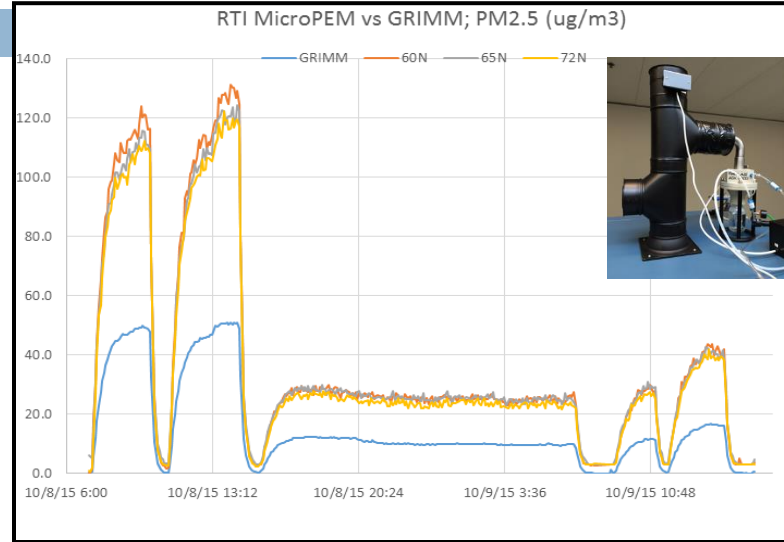

Gas testing

- Gas generation / dilution system
- Gas monitors: CO, NO_x, O₃, SO₂, H₂S, CH₄/NMHC

AQ-SPEC Lab Testing (continued)

T and RH controlled: T (0-50 °C); RH (5-95%)

Test for:

- Linearity of response (range)
- Accuracy & precision
- Lower detectable limit
- Concentration resolution
- Response time
- Interference equivalents
- RH and T influences
- Other

AQ-SPEC

Air Quality Sensor Performance Evaluation Center

AQ-SPEC

AQ-SPEC
Air Quality Sensor Performance Evaluation Center

Background

In an effort to inform the general public about the actual performance of commercially available "low-cost" air quality sensors, the SCAQMD has established the Air Quality Sensor Performance Evaluation Center (AQ-SPEC) program. The AQ-SPEC program aims at performing a thorough characterization of currently available "low-cost" sensors under ambient (field) and controlled (laboratory) conditions.

Main Goals & Objectives

- Evaluate the performance of commercially available "low-cost" air quality sensors in both field and laboratory settings
- Provide guidance and clarity for ever-evolving sensor technology and data interpretation
- Catalyze the successful evolution, development, and use of sensor technology

Sensor Selection Criteria

- The sensor shall have potential for near-term use.
- The sensor shall provide real- or near-real time measurements.
- The sensor shall measure one or more of the National Ambient Air Quality Standards (NAAQS) criteria pollutants, air toxics, pollutants of concern and non- air toxics. Examples of the targeted gases and particles are carbon monoxide (CO), ozone (O₃), nitrogen oxides (NO_x), particulate matter (PM), volatile organic compounds (VOCs), hydrogen sulfide (H₂S) and methane (CH₄).

Aeroqual S-500

Series 500 - Field Evaluation

General Description

The Aeroqual Series 500 handheld monitor can be used with a wide range of gas sensor heads. The sensor head used in this AQ-SPEC evaluation is the Ozone Ultra Low 0-0.15 ppm sensor head.

Principle of Operation

The device uses a sensitive metal oxide semiconductor that relies on the conductance of heated tungstic oxide (WO₃). In the presence of ozone, surface conductance of WO₃ decreases. Changes in the conductance are calibrated to measure ozone concentrations. During a "flow" state the sensor responds to incoming ozone the sensor conductance decreases. The ozone measurement is proportional to the sensor conductance difference between a no-flow and flow states.

Features

- Dimensions: 195 x 122 x 54 mm
- Weight: <460 g
- Battery: Yes (Lithium TLIV)
- Power supply: Yes (12V DC (power adaptor/charger supplied 100-250V AC)
- Sensor lifetime: N/A
- Clock function: Yes (Real time)
- Sampling mechanism: Fan
- Environmental operating conditions: Temp: -40°C to 124°C; RH: 0 to 100%
- Internal data logging: Yes (8188 total data points)
- PC data logging: Yes (with provided Aeroqual software + cable)
- Communications: monitor to USB cable
- Weatherproof: No

Applications

- Source and leak detection
- Process control
- Health and safety monitoring
- Indoor air quality

Manufacturer's product webpage

The screenshot shows the South Coast Air Quality Management District's AQ-SPEC website. The header includes the AQMD logo, the text "South Coast Air Quality Management District", and social media icons for Facebook, Twitter, Email, RSS, and YouTube. The main title "AQ-SPEC" is prominently displayed in large blue letters, with "Air Quality Sensor Performance Evaluation Center" underneath. A navigation menu on the left lists: Home, Sensors, Evaluations, Resources, Workshops, Sensor News, Contact Us, and About AQMD. Below the menu are language selection and sign-up options. The main content area features a "Evaluations" section with links for "field evaluations", "laboratory evaluations", and "available reports". A "List of Available AQ-SPEC Field Evaluations" section lists seven PDF documents with their respective file sizes:

- AirBeam - Field Evaluation** (PDF, 1.66 MB)
- MicroPEM - Field Evaluation** (PDF, 1.71 MB)
- PM Evaluation Kit - Field Evaluation** (PDF, 1.26 MB)
- Series 500 - Field Evaluation** (PDF, 1.14 MB)
- Smart Citizen Kit - Field Evaluation** (PDF, 1.30 MB)
- AQMesh AQM-5 - Field Evaluation** (PDF, 2.15 MB)
- DC1100 - Field Evaluation** (PDF, 1.28 MB)

FIELD TESTING RESULTS

(Examples)

AirBeam PM Sensor

- AirBeam Sensor (3 units tested):

- Optical particle counter (**non-FEM**)
- PM2.5 count (hundred particles/ft³) and PM2.5 mass (ug/m³)
- Time resolution: 1-min
- **Unit cost: ~\$200**

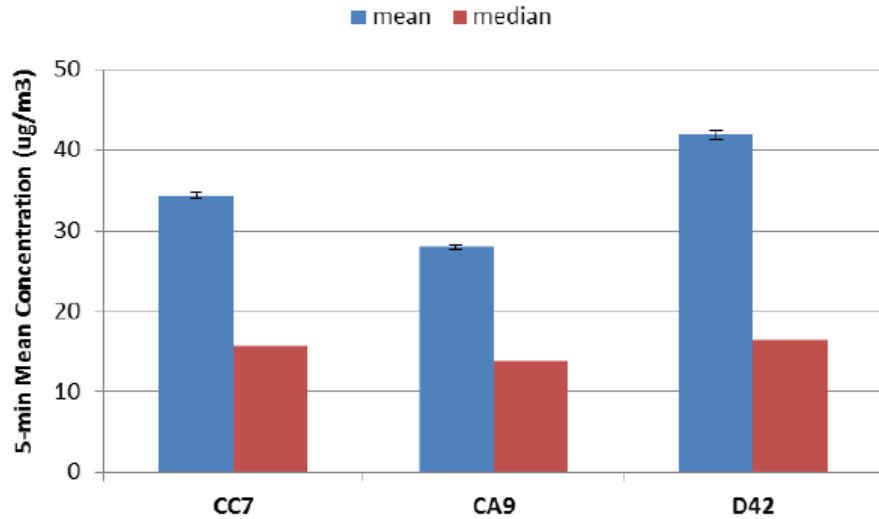

- MetOne BAM (reference method):

- Beta-attenuation monitor (**FEM**)
- Measures PM2.5
- **Cost: ~\$20,000**
- Time resolution: 1-hr

- GRIMM (reference method):

- Optical particle counter (**FEM**)
- Uses proprietary algorithms to calculate total PM, PM2.5, and PM1 from particle number measurements
- **Cost: ~\$25,000 and up**
- Time resolution: 1-min

AirBeam PM Sensor (continued)

Preliminary results:

- High intra-model variability
- Particle count conc.
 - Good correlation with FEM
- Particle mass conc.
 - Calibration issues
- AirBeam v2 recalibrated using field testing data

AirBeams vs FEM GRIMM; PM2.5 (1-hr mean)

AirBeam vs FEM GRIMM; PM2.5

Dylos DC1100/DC1700

- Dylos (3 units tested):

- Optical particle counter (**non-FEM**)
- Three different size fractions including PM(0.5-2.5) (used as an estimate of PM2.5)
- Time resolution: 1-min
- **Cost: ~\$300**

- MetOne BAM (reference method):

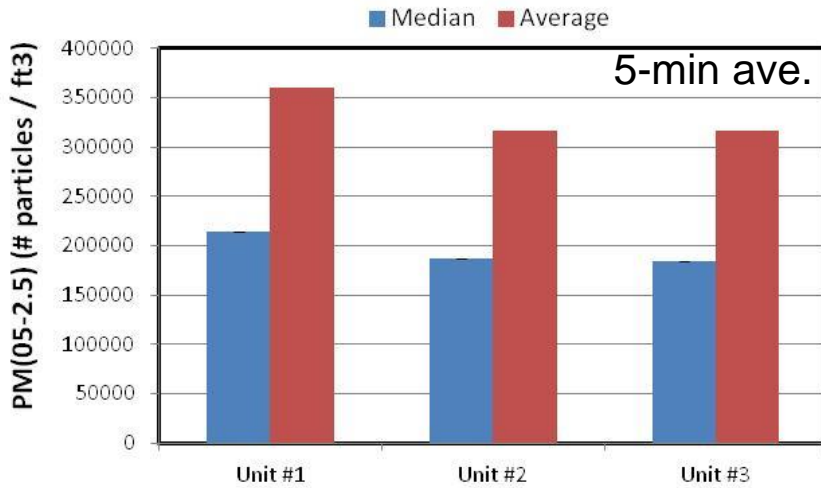

- Beta-attenuation monitor (**FEM**)
- Measures PM2.5
- **Cost: ~\$20,000**
- Time resolution: 1-hr

- GRIMM (reference method):

- Optical particle counter (**FEM**)
- Uses proprietary algorithms to calculate total PM, PM2.5, and PM1 from particle number measurements
- **Cost: ~\$25,000 and up**
- Time resolution: 1-min

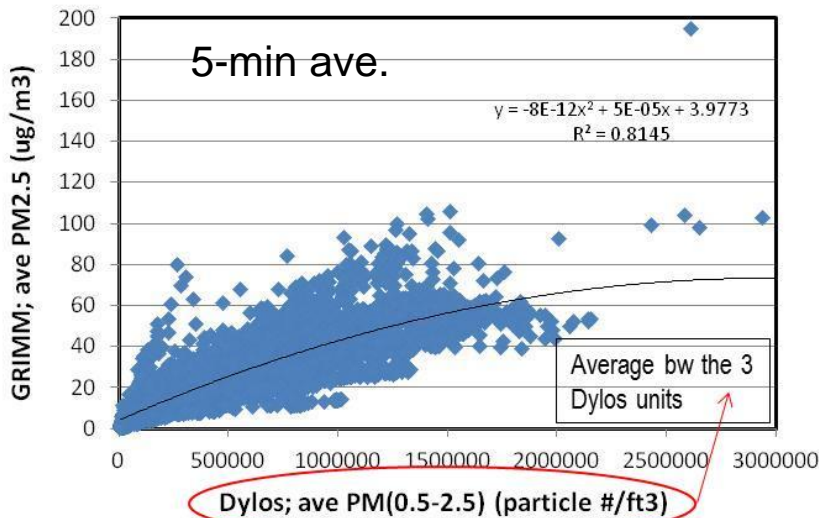

Dylos DC1100/DC1700 (continued)

Dylos ; intra-model variation

Preliminary results:

- Modest intra-model variability
- Particle count conc.
 - Good correlation with FEM
- Particle mass conc.
 - Can be derived via FEM calibration

Dylos vs GRIMM (FEM)

SmartCitizen Kit

- Smart Citizen Kit (3 units tested):

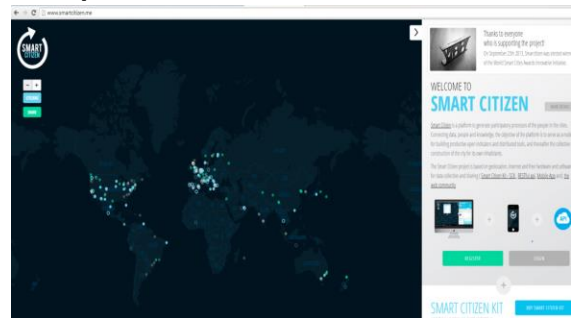

- Metal-oxide sensor (**non-FEM**)
 - CO (kOhm), NO2 (kOhm),
- Temperature (C) and Relative Humidity (%)
- Time resolution: 1-min
- **Unit cost: ~\$200**

- SCAQMD FRM instruments:

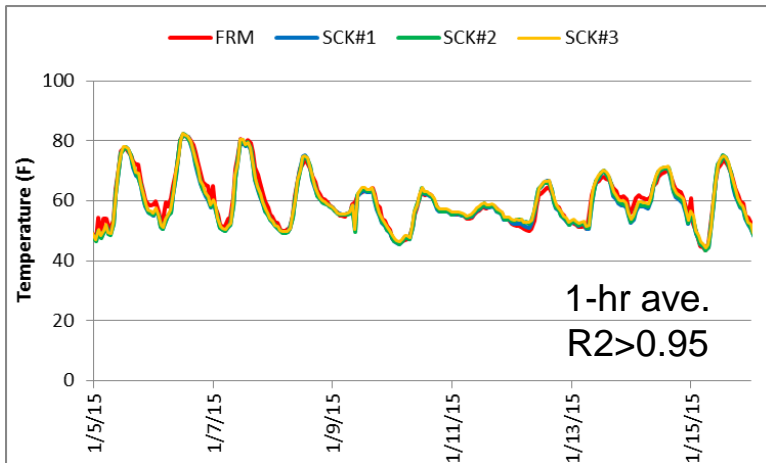

- CO instrument; **cost: ~\$10,000**
 - Time resolution: 1-min
- NOx instrument; **cost: ~\$11,000**
 - Time resolution: 1-min
- Meteorological station (wind speed, wind direction temperature, relative humidity, and pressure); **cost: ~\$5,000**
 - Time resolution: 1-min

<http://www.smartcitizen.me/>

SmartCitizen Kit (continued)

- Preliminary results:

- Low intra-model variability
- CO: good correlation with FRM

- NO2: no correlation with FRM
- Reliable T and RH data

AeroQUAL S-500

- AeroQUAL S-500 (3 units tested):

- Metal-oxide sensor (**non-FRM**)
 - Ozone (pphm)
- Temperature (C) and Relative Humidity (%)
- Time resolution: 1-min
- **Unit cost: ~\$500**

- SCAQMD FRM instruments:

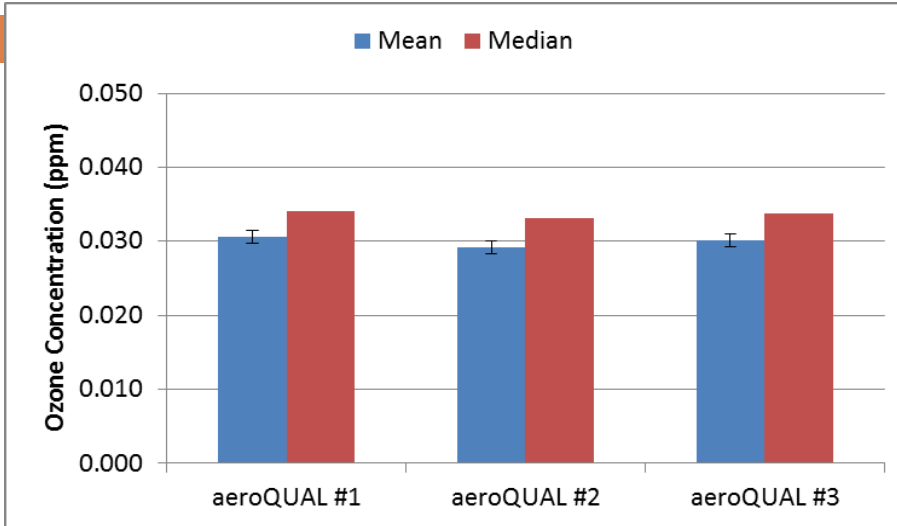

- Ozone instrument; **cost: ~\$7,000**
 - Time resolution: 1-min
- Meteorological station (wind speed, wind direction temperature, relative humidity, and pressure); **cost: ~\$5,000**
 - Time resolution: 1-min

AeroQUAL S-500 (continued)

- Preliminary results:

- Low intra-model variability
- Ozone conc.
 - Good correlation with FEM
- Slight signal degradation over time (sensor replacement available)

Field Testing - Discussion

PM (optical) sensors:

- Minimal down time
- Low intra-model variability
- Strong correlation (R^2) with two different FEM instruments
- Sensor “calibration” may be needed
- Potential sources of error:
 - Sensors cannot detect very small particles (e.g. $<0.5 \mu\text{m}$ for Dylos)
 - Bias in algorithms used to convert particle counts to particle mass

Gaseous sensors:

- Minimal down time
 - Low intra-model variability
 - CO; NO; O₃ (when measured alone): good correlation with FRMs
 - O₃ and/or NO₂: low correlation with FRM (potential O₃ NO₂ interference)
 - SO₂: difficult to measure with current electrochemical sensors
-
- Chamber testing is necessary to fully evaluate the performance of these sensors
 - All results are still preliminary

Field Testing - Summary

Manufacturer (Model)	Type	Pollutant(s)	Cost	Time Resolution	Sensor vs FEM/FRM Method*
HabitatMap (AirBeam)	Optical	PM2.5	~\$200	1 min	R ² ~0.70
Dylos (DC1100)	Optical	PM(0.5-2.5)	~\$300	1 min	R ² ~0.85
Alphasense (OPC-N2)	Optical	PM1 PM2.5 PM10	~\$400	15 sec	R ² ~0.85 R ² ~0.90 R ² ~0.80
Shinyei (PM Evaluation Kit)	Optical	PM2.5	~\$1,000	1 min	R ² ~0.85
MetOne (Neighborhood Sensor)	Optical	PM2.5	~\$1,900	15 sec	R ² ~0.70
RTI (MicroPEM)	Optical	PM2.5	~\$2,000	10 sec	R ² ~0.80

*Comparisons refer to 1-hr average data; results are still preliminary; laboratory evaluations needed to confirm field results

Field Testing – Summary (cont.)

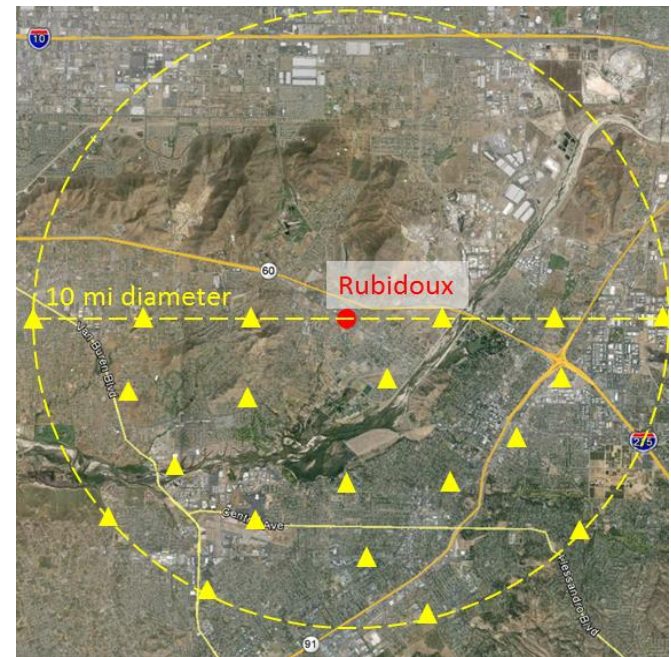

Manufacturer (Model)	Type	Pollutant(s)	Cost	Time Resolution	Sensor vs FEM/FRM Method*
Smart Citizen Kit	Metal oxide	CO, NO ₂	~\$200	1 min	R ² (CO)~0.85 R ² (NO ₂): unreliable
Aeroqual (S-500)	Metal oxide	O ₃	~\$500	1 min	R ² ~0.85
Landtec (AQMesh AQM-5)	Electrochem.	CO, NO, NO ₂ , SO ₂ , and O ₃	~\$10,000	1-15 min	R ² (CO)~0.85 R ² (NO)~0.85 R ² (NO ₂)<0.50 R ² (O ₃)<0.50 R ² (SO ₂): unreliable

*Comparisons refer to 1-hr average data; results are still preliminary; laboratory evaluations needed to confirm field results

Upcoming SCAQMD Activities

Pilot Study #1:

- Create a small sensor network
 - 20-25 sensors deployed @
 - ✓ Existing monitoring stations
 - ✓ Near road sites
 - ✓ Public and private locations
 - Target PM, O₃, NO₂, CO
 - Test sensor durability
 - Show ability to scale up in future
- Test connectivity options
 - Cellular
 - LoRa WAN
 - Digi mesh
- Explore various data ingestion, storage, and analytics solutions

Upcoming SCAQMD Activities

Pilot Study #2:

- Explore fence-line applications (use as a screening tool)
- Monitor PM emissions from a waste disposal facility
 - 15-20 sensors deployed
 - ✓ Around the facility
 - ✓ Inside the facility
 - ✓ Downwind of facility
 - Test sensor durability
- Use wireless mesh network
- Explore various data ingestion, storage, and analytics solutions
- Provide real-time feedback and alerts

Upcoming SCAQMD Activities

- US EPA “Community-scale Air Toxics Ambient Monitoring” grant:
“Application Of Next Generation Air Monitoring Methods To Characterize Hazardous Air Pollutant Emissions From Refineries and Assess Potential Impacts To Surrounding Communities”
- June 1, 2015 – May 31, 2018
- Use Optical Remote Sensing (ORS) methods to monitor Hazardous Air Pollutant (HAP) emissions from refineries and to estimate their annual VOC emissions
- Use of ORS methods and “low-cost” sensors to assess the impact of industrial HAP emissions on surrounding communities

Expected Results and Next Steps

- ✓ Provide the knowledge necessary to appropriately select, use, and maintain sensors and correctly interpret their data
- ✓ Promote a better and more responsible use of sensors
- ✓ Discover new and more effective ways to interact with local communities
- ✓ Provide manufacturers with valuable feedback for improving current and next generation sensor technology
- ✓ Create a “sensor library” to make “low-cost” sensors available to communities, schools, and individuals across California

UPCOMING NEW TECHNOLOGIES

Scientific Aviation

Mooney TLS Aircraft / Measuring CH₄

Placement

GMAP – Benzene at a Tank Farm

GMAP – Methane at an LNG Fueling Station

Upcoming New Technologies: Optical Remote Sensing

- Upcoming SCAQMD projects using optical remote sensing (ORS) methods to characterize/quantify fugitive and stack emissions from large refineries, small point sources, and marine vessels (\$1.1 million)

Solar Occultation Flux

Differential Absorption Lidar

Fourier transform infrared spectroscopy

Upcoming New Technologies: Optical Remote Sensing

Three Projects in 2015 –

Four Vendors:

- FluxSense (SOF+FTIR+DOAS)
- National Physical Laboratories (DIAL)
- Atmosfir Optics, Ltd. (Open-Path FTIR)
- Kassay Field Services (Open-Path FTIR)

Ongoing Projects - 2015

Project 1 - Quantify fugitive emissions from large refineries

- *Main measurements: FluxSense*
 - SOF+FTIR+DOAS / mobile measurements (daytime only)
 - 5 week study at 5 refineries (6 sites)
 - Facility-wide emissions of methane, non-methane VOCs, NO_x, SO₂
 - Accurate meteorological (LIDAR) data to reduce uncertainty
- *Validation measurements: NPL*
 - DIAL / stationary measurements
 - (daytime and nighttime)
 - 1 week study at 1 refinery
 - Facility-wide emissions of methane, non-methane VOCs, NO_x, SO₂
 - Not suited for long-term measurements but ideal for field validation

- *Validation measurements: Atmosfir*
 - Open-path FTIR / stationary measurements (daytime and nighttime)
 - 5 week study at 1 refinery
 - Prolonged measurements of methane, non-methane VOCs, NO_x, SO₂
 - Higher detection limits but thoroughly validated method (EPA OTM-10)

Ongoing Projects – 2015 (continued)

Project 2 - Quantify gaseous emissions from small point sources

- *Main measurements: FluxSense*
 - SOF+FTIR+DOAS / mobile measurements (daytime only)
 - 5 week study at 50 to 100 oil wells, 20 to 40 gas stations, and other point sources
 - Methane and non-methane VOCs
 - Accurate meteorological (LIDAR) data to reduce uncertainty

- *Validation measurements: NPL*
 - DIAL / stationary measurements (daytime and nighttime)
 - 1 week study at 7 point sources
 - Methane and non-methane VOCs
 - Ideal for field validation

- *Validation measurements: Kassay*
 - Open-path FTIR / stationary measurements (daytime and nighttime)
 - 5 week study at 50 point sources
 - Methane and non-methane VOCs
 - Higher detection limits but proven method (EPA TO-16)

Ongoing Projects – 2015 (continued)

Project 3 - Quantify stack emissions from marine vessels

- *Main Measurements: FluxSense*
 - Optical + "traditional" methods / on-shore and off-shore (ship) measurements
 - 4 week study @ POLA or POLB
 - "Real world" emissions (g/s) of SO₂ and NO₂ and "actual" emission factors (g/Kg fuel burnt) of SO₂, NO_x and particulates from individual ships

Schedule for Projects 1-3

- Completion of measurement campaign: end of October 2015
- Final Reports: 1st Quarter 2016
